

RUSTALL RUST & WEATHERING PLASTIC MODELS IN FOUR EASY STEPS

Step One
RUSTALL

Stir the Rustall and start with an overall rust wash and let dry. The first coat is subtle and you can repeat for more rust.
Let dry and add rust runs.

The Rustall formula is designed to leave a random rust effect on all light or dark colors and won't craze plastic or paint.

Step Two
BLACKWASH

BLACKWASH adds dimension to your project by bringing out depth and texture around bolts, hatches and other fine detail.

Step Three DEADFLAT

DEADFLAT will result in a random and natural flat finish. Several coats will age and fade tires, dirty up windshields and simulate sun faded uniforms and clothing.

Step Four DUST

DUST is clay silt that we grind and sift several times into a fine dust.

The Result
